**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

<b>Office Action Summary</b>	<b>Application No.</b> 10/527,397	<b>Applicant(s)</b> GEHRMANN, CHRISTIAN	
	<b>Examiner</b> George C. Neurauter, Jr.	<b>Art Unit</b> 2443	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 08 March 2005.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 1-22 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-22 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 08 March 2005 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All    b) ☐ Some \*    c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☒ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

### Attachment(s)

| 2) <input type="checkbox"/> Notice of Draftsperson's Patent Drawing Review (PTO-948)   | Paper No(s)/Mail Date. _____                                      |
| 3) <input checked="" type="checkbox"/> Information Disclosure Statement(s) (PTO/SB/08) | 5) <input type="checkbox"/> Notice of Informal Patent Application |
| Paper No(s)/Mail Date <u>3/8/2005, 7/18/2005, 3/3/2008</u> .                           | 6) <input type="checkbox"/> Other: _____                          |

## **DETAILED ACTION**

Claims 1-22 are currently presented and have been examined.

### ***Information Disclosure Statement***

The information disclosure statements (IDSes) submitted on 8 March 2005, 18 July 2005, and 3 March 2008 were filed before the mailing of a first action on the merits. The submissions are in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

### ***Claim Rejections***

Claims 1-4, 6, 8-18, 20, and 22 are rejected in view of the Applicant's admitted Prior Art ("AAPA"). The Applicant described subject matter in the specification at page 3, lines 12-17, page 6, lines 23-29, page 21, lines 13-27, page 22, line 23-page 23, line 2, page 25, lines 5-14, page 25, line 23-page 26, line 2, and page 27, lines 4-12 that was by another, therefore, this statement is construed by the Examiner that this statement constitutes an admission of prior art and any subject matter associated with these statements are construed to be prior art applicable to the claims. See MPEP 2129 and *Riverwood Int'l Corp. v. R.A. Jones & Co.*, 324 F.3d 1346, 1354, 66 USPQ2d 1331, 1337 (Fed Cir. 2003). Note that this rejection is separate and distinct from prior art rejections made under 35 USC 102 and 103.

Regarding claim 1, "AAPA" disclosed a method of providing to a client communications device access to a subscription module ("module that is physically inseparable from the server communications device"; see page 9, lines 20-22) of a server communications device, the method comprising the steps of:

Art Unit: 2443

establishing a communications link between the client communications device and the server communications device; and communicating a number of messages (M) comprising data related to the subscription module (communicated data using a Bluetooth connection) between the server communications device and the client communications device via the communications link (wireless Bluetooth connection); wherein the method further comprises the step of providing integrity protection (“any method of assuring that information sent from an originating source is not accidentally or maliciously altered or destroyed during communication from the source to the receiver”; see page 5, lines 12-14 of the specification) of the messages communicated between the server communications device and the client communications device via the communications link. (see at least page 3, lines 12-17 and page 7, lines 1-6 of the specification)

Regarding claim 2, “AAPA” disclosed the method according to claim 1, wherein the step of providing integrity protection further comprises calculating, based on a secret session key, a respective message authentication code for each of the communicated messages; and including the calculated message authentication code into the corresponding communicated message. (see at least page 22, line 23-page 23, line 2)

Regarding claim 3, “AAPA” disclosed the method according to claim 2, wherein the step of establishing a communications link between the client and server communications devices comprises determining a secret session key based on a shared secret between the server and client communications devices. (see at least page 25, line 23-page 26, line 2)

Art Unit: 2443

Regarding claim 4, "AAPA" disclosed the method according to claim 3, wherein the method further comprises providing the shared secret by performing a secure pairing procedure including receiving a passcode by at least one of the client communications device and the server communications device. (see at least page 27, lines 4-12)

Regarding claim 6, "AAPA" disclosed the method according to claim 3, wherein the communications link has a secret link key related to it and the method further comprises providing the shared secret by calculating the shared secret using the secret link key as an input. (see at least page 25, lines 5-14)

Regarding claim 8, "AAPA" disclosed the method according to claim 1, wherein the method further comprises determining, for the messages communicated from the client communications device to the server communications device, whether the message is authorised to address the subscription module. (see at least page 3, lines 12-17 and page 7, lines 1-6 of the specification)

Regarding claim 9, "AAPA" disclosed the method according to claim 8, wherein the method further comprises: providing a shared secret between the client communications device and the server communications device; and providing an access control list stored in the server communications device in relation to at least one of the shared secret and the client communications device. (see at least page 27, lines 4-12) (note that the server specifically interacts with the client using cryptography, therefore, a strong association between the server and the client is established and the cryptographic settings used between the client and the server on the server is

Art Unit: 2443

considered to encompass the claimed "access control list" where the server is in a generic and nominal relation to the "client communications device", therefore allowing the client access to the server based on the agreed upon cryptographic settings)

Regarding claim 15, "AAPA" disclosed the method according to claim 14, wherein the access control list is stored in a protected database. (note that cryptographic settings are essential to the security of the connection and are stored in confidence at the server and are thus considered to be "protected")

Claims 10-12 are also rejected since these claims recite substantially the same limitations as recited in claim 1.

Claims 13 and 22 are also rejected since these claims recite substantially the same limitations as recited in claims 1 and 8 in combination.

Claim 14 is rejected since this claim recites substantially the same limitations as recited in claim 9.

Claims 16-20 are also rejected since these claims recite substantially the same limitations as recited in claims 2-6 respectively.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 2443

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claim 5 and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over “AAPA”.

Regarding claim 5, “AAPA” disclosed the method according to claim 4.

“AAPA” did not expressly disclose wherein the passcode is at the most 48 bits long.

It would have been obvious to one having ordinary skill in the art at the time of the invention was made to create a passcode which is at most 48 bits long, since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. In re Boesch, 617 F.2d 272, 205 USPQ 215 (CCPA 1980).

Claim 19 is also rejected since this claim recites substantially the same limitations as recited in claim 5.

Claims 7 and 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over “AAPA” in view of US Patent 6,449,473 to Raivisto.

Regarding claim 7, “AAPA” disclosed the method according to any one of claims 2 through 6.

“AAPA” did not expressly disclose wherein the method further comprises: incorporating a value of a first counter in each of the messages communicated from the client communications device to the server communications device, the first counter being indicative of the number of messages communicated from the client communications device to the server communications device; and incorporating a value of a second counter in each of the messages communicated from the server communications device to the client communications device, the second counter being indicative of the number of messages communicated from the server communications device to the client communications device; and wherein the step of calculating a respective message authentication code for each of the communicated messages comprises calculating a message authentication code for each of the communicated messages and the corresponding counter value, however, Raivisto did disclose these limitations (the counter value being a “sequence number”; see at least column 3, line 66-column 4, line 26)

It would have been obvious to one of ordinary skill in the art at the time the invention was made to combine the teachings of these references since Raivisto disclosed that using counter values in the calculation of the message authentication code allows for the specific advantage of recalculating the code for stronger security and to enable synchronous recalculation between the client and the server (see at least column 4, line 5-9). Therefore, based on this specific motivation and that the references are analogous to one another in the context of message security and communication security, one of ordinary skill would have been motivated to modify the teachings of

Art Unit: 2443

“AAPA” to include the subject matter taught in Raivisto in order to arrive at a more robust and secure communication link between a client and a server.

Claim 21 is also rejected since this claim recites substantially the same limitations as recited in claim 7.

### ***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to George C. Neurauter, Jr. whose telephone number is (571)272-3918. The examiner can normally be reached on the hours between 8:30am-5:00pm Eastern.

If attempts to reach the examiner by telephone are unsuccessful, the examiner’s supervisor, Tonia Dollinger, can be reached on 571-272-4170. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
